

Today our Springfield community had its 5th COVID-19 positive case. Increase in positive cases are to be anticipated based upon the tremendous increase of testing for the virus. Since this virus has been defined as a pandemic it means that communities will have more positive virus test and that will help us to attract the data which is so important to help to determine trends within the community our county and New Jersey.

By each one of us taking the initiative to follow good public health practices of social distancing, washing hands, covering our cough, not touching our face or eyes, and when sick stay home, is extremely important.

As a community we will be able to whether this public health issue by following these good public health practices and the directive of our Governor.
